

REBEL KART XR

RELIABILITY · REBEL ATTITUDE · NO COMPROMISE

The Rebel Kart XR is designed to revolutionize the drift kart and gokart market. Developed specifically for the Crazy Karts concept, it combines drifting, manoeuvrability and fun, and is built for both private and commercial use. Available in standard and XL size, each kart is assembled in Denmark with focus on durability, safety and frequent use.

REBEL KART XR IS THE SOLUTION!

Why buy a double fleet because the battery is permanently mounted or not easily replaceable? Compare the Rebel Kart XR with models from China and the USA and discover why it is engineered for reliability, EU compliance and non-stop commercial operation — durable and capable of continuous running without the battery, motor or controller breaking down. The Rebel Kart XR features a one-hand easy-swap battery that can be replaced in just a few seconds when charging is required. This minimizes downtime and keeps your karts running.

THE POWER TRAIN

BUILT FOR POWER. READY FOR THE OUTDOORS.

The Rebel Kart XR drivetrain for standard and XL size combines a high-performance battery, advanced controller and powerful brushless motor to deliver smooth, responsive and reliable performance. The ONE HAND EASY SWAP battery is assembled and CE marked in Denmark, which gives you a guarantee of quality.

Designed for demanding commercial use, the drivetrain is built to perform in both indoor and outdoor environments, delivering consistent power, durability and low maintenance — even under high-use conditions.

HOW TO CHOOSE THE RIGHT DRIFT KART FLEET?

Choosing the right kart fleet is about more than price. It is about uptime, safety, compliance and the total cost of ownership across thousands of sessions. GoDrift CPH Aps karts are designed and assembled in Europe for European operators, with the features that matter when you run a commercial drift venue.

INCLUDING

- ✓ App-programmable system with customizable settings
- ✓ Bluetooth connectivity
- ✓ CAN-bus support
- ✓ Multi-mode motor maps/profiles, including a dedicated Learner Mode
- ✓ Adjustable motor braking, top-speed configuration etc.

OPTIONAL — EMERGENCY & OTHER FUNCTIONALITIES

- ✓ Extremely powerful charger for the 48V battery — charge time only 1 hour
- ✓ Compliant with remote emergency-stop fleet systems
- ✓ Support for remote data acquisition for diagnostics and safety logging

SAFETY FIRST

Visual emergency stop, reinforced fork, protected battery housing and full chassis protection.

POWER & UPTIME

48V system, one-hand battery swap, fast charger and visual battery indicator for continuous operation.

EU READY

CE-marked components, EU assembly, fast delivery and local support line.

FULL COMPARISON
